

24 July 21 - worldivermectinday.org

Did you
know?

COVID is treatable!

IVERMECTIN

Covid can be prevented & treated with a safe, low-cost, generic tablet called Ivermectin.

Share this positive message to the world!

WORLD
IVERMECTIN
DAY
24 JULY 2021

We're uniting for ivermectin

We are joined by health professionals, lawyers, musicians and artists and people of all backgrounds and nations to spread the amazing news about ivermectin.

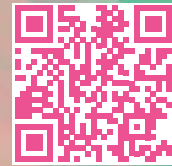

All about the evidence

On World Ivermectin Day (and everyday), we are encouraging all nations who haven't yet adopted ivermectin as part of their Covid treatment plan to take a serious review of the mountain of robust clinical evidence so they too can improve their people's health and economies.

Saving lives now!

We are sharing the good news of how it is being successfully used by thousands of doctors in multiple countries as the way to prevent, treat and beat covid and end the pandemic. It is even effective against variants.

A brighter future for people and economies

Ivermectin is ready to heal the world right now! Not just for the wealthier countries, but for EVERYONE. It's safe, easily made and simple to send around the world.

The future is much brighter with ivermectin.
